

Change type: part replacement Old part: PN-1212 New part: PN-2212 Reason: The current pressure relief valve PN-1212 is being replaced because the supplier has issued an end-of-life notice and the replacement valve has improved pressure stability for field service conditions. Effective date: 2026-08-15

Affected product context: The change applies to the Cooling Manifold Assembly used in the Cooling Skid Final Assembly.

Implementation notes: - Replace PN-1212 Pressure relief valve with PN-2212 High-stability pressure relief valve. - Review procurement records for supplier, lead time, cost, and approved vendor details. - Review installation guide torque and orientation instructions for the valve. - Review commissioning pressure test procedure and acceptance criteria. - Review service manual replacement procedure and spare parts list.

Expected risk: Medium. The affected part is inside the cooling manifold path and may impact procurement, installation, commissioning, and service documentation.
